Table Of Content

Chapter 1: What is Business Analysis? Process & Techniques

1. [What is Business analysis?](#)
2. [Why use Business analysis?](#)
3. [Steps involved in Business Analysis Process](#)
4. [Common Business Analysis Techniques](#)

Chapter 2: What is Business Analyst? Roles, Responsibility, Skills, Certifications

1. [Who is a Business Analyst?](#)
2. [Different Business Analyst Role](#)
3. [Skills of a Good Business Analyst](#)
4. [Certifications](#)
5. [Jobs](#)

Chapter 3: EXAMPLE of Stakeholder Analysis & Mapping with Template

1. [When Stakeholder Analysis need to be done?](#)
2. [Stakeholders Categorization](#)
3. [Process for Stakeholder Analysis](#)
4. [Important questions to ask during Stakeholder Analysis Mapping](#)
5. [Tips to manage your Stakeholders](#)

Chapter 4: What is V Model in Software Testing? Learn with SDLC & STLC Example

1. [EXAMPLE To Understand the V Model](#)
2. [Problem with the Waterfall Model](#)
3. [Solution: The V Model](#)

Chapter 5: Requirement Life Cycle Management

1. [What is Lifecycle of Requirement?](#)
2. [Phase 1: Requirement Definition](#)
3. [Phase 2: Requirement Validation](#)
4. [Phase 3: Requirement Documentation](#)
5. [Phase 4: Requirement Management](#)

Chapter 6: What is Waterfall Model in SDLC? Advantages & Disadvantages

Chapter 7: What is RAD Model? Advantages & Disadvantages

1. [Different phases of RAD model includes](#)
2. [When to use RAD Methodology?](#)
3. [Advantages and Disadvantages of SDLC RAD Model](#)

Chapter 8: Incremental Model in SDLC: Use, Advantage & Disadvantage

1. [Characteristics of an Incremental module includes](#)
2. [When to use Incremental models?](#)
3. [Advantages and Disadvantages of Incremental Model](#)

Chapter 9: What is Spiral Model? When to Use? Advantages & Disadvantages

1. [What is Spiral Model?](#)
2. [Spiral Model Phases](#)
3. [When to use Spiral Methodology?](#)

Chapter 10: Agile Methodology & Model: Guide for Software Development & Testing

1. [What is Agile Methodology?](#)
2. [Agile Vs Waterfall Method](#)
3. [Scrum](#)

4. [Product Backlog](#)
5. [Scrum Practices](#)
6. [Process flow of Scrum Methodologies:](#)
7. [eXtreme Programming \(XP\)](#)
8. [Phases of eXtreme programming:](#)
9. [Crystal Methodologies](#)
10. [Dynamic Software Development Method \(DSDM\)](#)
11. [Feature Driven Development \(FDD\)](#)
12. [Lean Software Development](#)
13. [Kanban](#)
14. [Agile metrics:](#)

Chapter 11: Software Requirements Analysis with Example

Chapter 12: Requirements Analysis Techniques with Example: Complete Tutorial

Chapter 13: What is a Functional Requirement? Specification, Types, EXAMPLES

1. [What is the Requirement?](#)
2. [What is a Functional Requirement?](#)
3. [What should be included in the Functional Requirements Document?](#)
4. [Benefits of Functional Requirement](#)
5. [Example of Functional Requirements](#)
6. [Non Functional vs. Functional Requirements](#)
7. [Best practice of Functional Requirement](#)
8. [Mistakes While Creating a Functional Requirement](#)

Chapter 14: What is Non-Functional Requirement? Types and Examples

1. [What is Non-Functional Requirement?](#)
2. [Types of Non-functional Requirement](#)
3. [Examples of Non-functional requirements](#)
4. [Functional vs Non Functional Requirements](#)
5. [Advantages of Non-Functional Requirement](#)
6. [Disadvantages of Non-functional requirement](#)

Chapter 15: Functional Requirements vs Non Functional Requirements: Key Differences

1. [What is a Functional Requirement?](#)
2. [What is Non-Functional Requirement?](#)
3. [Example of Functional Requirements](#)
4. [Examples of Non-functional requirements](#)
5. [Functional vs Non Functional Requirements](#)
6. [Advantages of Functional Requirement](#)
7. [Advantages of Non-Functional Requirement](#)

Chapter 16: How to organize Requirements as a Business Analyst

1. [How to organize and present a business requirement](#)
2. [Useful tips for presenting requirements](#)

Chapter 17: Change Control Process in Software Engineering with Steps

1. [What is Change Control?](#)
2. [Why Change Control?](#)
3. [Different factors of Change Control process](#)
4. [Process of Change Control](#)
5. [Change Process Flow-Diagram](#)
6. [Steps for Change Control](#)
7. [Change Management Vs Change Control](#)

Chapter 18: BRS vs SRS: Know the Difference

Chapter 19: What is Software Testing? Introduction, Definition, Basics & Types

1. [Why is Software Testing Important?](#)
2. [Types of Software Testing](#)

Chapter 20: Manual Testing Tutorial for Beginners: Concepts, Types, Tool

1. [Goal of Manual Testing](#)
2. [Types of Manual Testing:](#)
3. [How to perform Manual Testing](#)
4. [Myths of Manual Testing](#)
5. [Manual Testing vs Automation Testing](#)
6. [Tools to Automate Manual Testing](#)

Chapter 21: Defect/Bug Life Cycle in Software Testing

Chapter 22: What is User Acceptance Testing (UAT)? with Examples

1. [Who Performs UAT?](#)
2. [Need of User Acceptance Testing:](#)
3. [Acceptance Testing and V-Model](#)
4. [How to do UAT Testing](#)
5. [Exit criteria for UAT:](#)
6. [Qualities of UAT Testers:](#)
7. [Best Practices:](#)
8. [UAT Tools](#)
9. [Some Example Guidelines of UAT](#)

Chapter 23: Impact Analysis in Software Testing

Chapter 24: Business Analysis Process: Step by Step Tutorial

Chapter 25: What is ER Modeling? Learn with Example

1. [What is ER Modeling?](#)
2. [Enhanced Entity Relationship \(EER\) Model](#)
3. [Why use ER Model?](#)
4. [Entities in the "MyFlix" library](#)
5. [Defining the relationships among entities](#)

Chapter 26: Decision Table Testing: Learn with Example

1. [What is Decision Table Testing?](#)
2. [Example 1: How to make Decision Base Table for Login Screen](#)
3. [Example 2: How to make Decision Table for Upload Screen](#)
4. [Why is Decision Table Testing is important?](#)
5. [Advantages of Decision Table Testing](#)
6. [Disadvantages of Decision Table Testing](#)

Chapter 27: What is Static Testing? What is a Testing Review?

1. [What is Testing Review?](#)
2. [Why Static Testing?](#)
3. [What is Tested in Static Testing](#)
4. [How Static Testing is Performed](#)
5. [Static Testing Techniques](#)
6. [Tools used for Static Testing](#)
7. [Tips for Successful Static Testing Process](#)

Chapter 28: Software Configuration Management in Software Engineering

1. [What is Software Configuration Management?](#)
2. [Why do we need Configuration management?](#)
3. [Tasks in SCM process](#)
4. [Configuration Identification:](#)
5. [Baseline:](#)
6. [Change Control:](#)

7. [Configuration Status Accounting:](#)
8. [Configuration Audits and Reviews:](#)
9. [Participant of SCM process:](#)
10. [Software Configuration Management Plan](#)
11. [Software Configuration Management Tools](#)

Chapter 29: Microsoft VISIO Tutorial: History, File Types

1. [What is Microsoft Visio?](#)
2. [History of Microsoft Visio](#)
3. [Visio File Types](#)
4. [Download and Install Visio](#)
5. [Important components of Visio](#)
6. [How to use Microsoft Visio](#)
7. [Applications of Microsoft Visio](#)
8. [Best practices of using Microsoft Visio](#)
9. [Benefits of Microsoft Visio](#)
10. [Disadvantages of Visio](#)

Chapter 30: Drools Tutorial: Architecture, Rules Engine EXAMPLES

1. [What is Drool?](#)
2. [What is Rule?](#)
3. [What is the Rule Engine?](#)
4. [Drools Tools Suite](#)
5. [Important components in Drools](#)
6. [Architecture of Drools](#)
7. [Features of Drool](#)
8. [How to add Drools plugins in Eclipse](#)
9. [Create a Drools Program](#)
10. [Why use Drools Rule Engine?](#)
11. [Disadvantages of Rules Engine](#)

Chapter 1: What is Business Analysis? Process & Techniques

What is Business analysis?

Business analysis defined as a research discipline that helps you to find the business needs and defining solutions to business problems. It also includes a software-systems development component.

Business Analysis process offers concepts and insights into the development of the initial framework for any project. It stores the key to guide stakeholders of a project who performs business modeling in an orderly manner.

Why use Business analysis?

Here are important reasons for using Business analysis methods:

- It helps you to understand the structure and the dynamics of the company
- It allows you to understand current problems in the target organization.
- It helps you to identify improvement potentials and recommending solutions to enable an organization to achieve goals.
- It helps you to identify and articulate the need for change.
- To maximize the value delivered by an organization to its stakeholders.

Steps involved in Business Analysis Process

Here are the steps for Business Analysis:

1. Enterprise analysis
2. Requirement planning and Management
3. Requirement Elicitation
4. Requirement analysis and Documentation
5. Requirement Communication
6. Solution Evolution and Validation.

Step 1) Enterprise Analysis

This area covers a collection of pre-project activities that leads to up to project selection guided by the Business Analyst.

The activities are as follows:

- It helps to maintain Business Architecture
- Allows you to prepare the Business Case
- Preparing for Decision Package

Step 2) Requirement Planning & Management

In this step, you need to define the tasks and resource which are associated with the planning and management of requirements. This helps you to ensure that the set of activities that are undertaken is appropriate according to the specific project. It is also important to capture changes correctly and consistently.

Step 3) Requirement Elicitation

The requirement elicitation phase consists of researching and discovering the requirements of a system from users, customers, and other stakeholders.

Step 4) Requirements Analysis & Documentation

This stage describes how stakeholder needs to analyse, structure, and specify the design and implementation of a solution. Requirements analysis helps you define the methods and tools used to structure the raw data.

Step 5) Requirements Communication

This phase is the collection of activities for expressing the output of the requirement analysis. Moreover, every requirement needs to be packaged, evaluated, and approved before the solution is implemented.

Step 6) Solution Evaluation and Validation

This phase ensures that a solution should be able to meet the stakeholder objectives.

Common Business Analysis Techniques

Here are the most important business analysis techniques:

MOST

SWOT

MoSCoW

CATWOE

The 5 Whys

Six Thinking
Hats

MOST

Most is a short form of Mission, Objectives, Strategies. It allows business analysts to perform thorough internal analysis of what is the aim of an organization to achieve and how to tackle such issues.

PESTLE

Pestle stands for (Political, Economic, Sociological, Technological, Legal, and Environmental). This model helps business analysts to evaluate all the external factors which can possibly impression their organization and determine how to address them.

SWOT

SWOT is a full form of Strengths, Weaknesses, Opportunities, and Threats. This technique helps you to find areas of both strength and weakness. It also allows for the proper allocation of resources.

MoSCoW

Must or Should, Could or Would process is a long-form of MosCow. This technique allows prioritization of requirements by presenting a framework in which every individual requirement should be evaluated relative to the others.

CATWOE

CATWOE is an acronym for Customers, Actors, Transformation Process, World View, Owner, and Environmental. This technique helps you to recognize processes that may be affected by any action the business undertakes.

The 5 Whys

This technique is a backbone of both Six Sigma and business analysis techniques. It consists of leading questions that allow business analysts to single out the root cause of an issue by asking why such a situation arises.

Six Thinking Hats

This process helps you to consider alternate perspectives and ideas. The 'six hats' in a technique which is categorized as:

- Green (creative thinking)
- Blue talk about big-picture overview. White
- (logical, data-driven thinking)
- Yellow (positive thinking, which mainly focused on pros) Red
- (emotion-based reactions)
- Black (opposing thinking, which is focused on cons)

Summary:

- Business analysis is a research discipline that helps you to find the business needs and defining solutions to business problems
- It helps you to understand the structure and the dynamics of the company
- Here are the steps for Business Analysis: 1) Enterprise analysis 2) Requirement planning and Management 3) Requirement Elicitation 4) Requirement analysis and Documentation 5) Requirement Communication and 6) Solution Evolution and Validation.

- Important business analysis techniques are: 1) MOST 2) PESTLE 3) SWOT 4) MoSCoW 5) CATWOE 6) The 5 Whys and, 7) Six Thinking Hats
- Most is a short form of Mission, Objectives, Strategies
- SWOT is a full form of Strengths, Weaknesses, Opportunities, and Threats
- Must or Should, Could or Would process is a long-form of MosCow
- CATWOE is an acronym for Customers, Actors, Transformation Process, World View, Owner, and Environmental
- This technique is a backbone of both Six Sigma and business analysis techniques
- This process helps you to consider alternate perspectives and ideas

Chapter 2: What is Business Analyst?

Roles, Responsibility, Skills, Certifications

Who is a Business Analyst?

Business Analysts have emerged to have a key role in recent business scenarios. Some people think that the role of a Business Analyst is to make money for the organization, which may not be true in direct context. But indirectly, the action and decision taken by Business Analysts do leave an impact on the financial prospects of the organization.

What does a Business Analyst Do?

A primary job responsibility of Business Analyst is to communicate with all stakeholders & to elicit, analyze and validate the requirements for changes to business processes, information systems, and policies.

A professional business analyst plays a big role in moving an organization toward efficiency, productivity, and profitability.

Before we jump into the tutorial, we will see some basic perspective of a Business Analyst to help the organization succeed. The foremost priority for any business analyst will be to try understanding following things

- Understand what business does and how it does Determine
- how to improve existing business processes
- Identify the steps or tasks to support the implementation of new features
- Design the new features to implement
- Analyze the impact of implementing new features Implement
- the new features

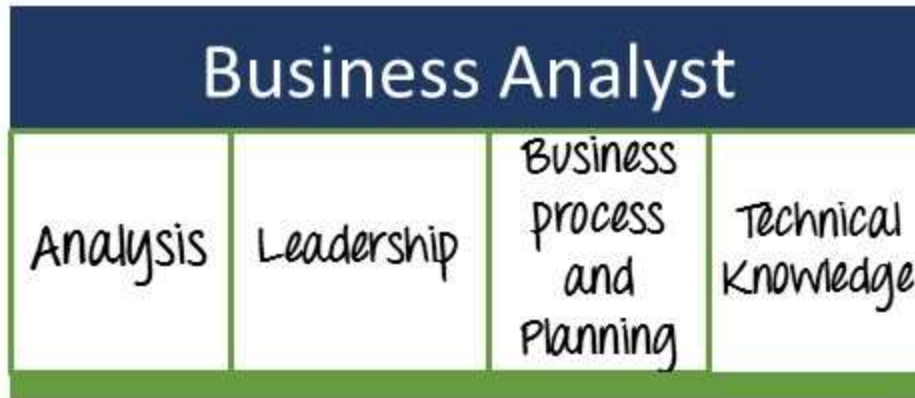

Different Business Analyst Role

Business Analyst can be from any sector, and the role differs based on the sector. Business Analyst are classified into various categories like

- Business Analyst Business
- Process Analyst IT Business
- Analyst Business System
- Analyst System Analyst
- Data Analyst Functional
- Architect Usability or UX
- Analyst

Skills of a Good Business Analyst

Basically, a good business analyst is judged on these four attributes

- **Analytical skills-** An outstanding analytical skills will separate out a good business analyst. A good part of BA role includes analyzing data, workflow, user or stakeholders inputs, documents, etc.
- **Leadership skills-** directing team members, forecasting budget, helping team members with the problem, etc.
- **Business process and planning-** Planning the project scope, understanding and implementing requirement of project, identifying resources required for the project and so on
- **Technical skill-** If a business analyst is in the IT sector, few technical aspect are expected to know like operating systems, hardware capabilities, database concepts, networking, SDLC methodology, etc.

Certifications

As per the International Institute of Business Analysis (IIBA), CBAP (Certified Business Analysis Professional) certification is a recognized certificate for a professional Business Analyst. They provide two types of certifications. The certification exam is computer based and consists of multiple choice questions.

- Certification of Competency in Business Analysis: Pre-requisite for this certification is atleast 3750 hours of work experience Certified Business
- Analysis Profession (senior level): Pre-requisite for this certification is atleast 7500 hours of work experience

For off-shore students, they can appear certification exam online. For more information, you can visit the website.

Jobs

Job prospectus for Business Analyst rises every year, especially for the IT sector. The average salary of business analyst is estimated around \$80,000 - \$130, 000, even at entry level.

International Institute of Business Analysis (IIBA) is growing exponentially indicating increasing demand of Business Analyst. Business Analyst always remain an organization priority since they have to work in a close proximity to top executives, clients, and stakeholders.

According to U.S Bureau of Labor Statistics, the BA job are predicted to increase by 19% between 2012 and 2022.
